MAGNETIC AUTOCONTROL™

TICKET IN CREDIT CARD OUT (TICO)

MCC 87
Credit Card Out

Technical Data:		MCC87
Display		LCD Backlit
Voltage (VAC)		115V AC
Frequency (Hz)		60
Communications		TCP/IP
Weight		100 lbs
Housing		
	Width	13 3/4”
	Depth	13 3/4”
	Height	50”

Description

The MCC series of Credit Card Exit Stations has been developed to provide parking operators with the ability to offer a unmanned, cash-less revenue collection system, while still providing the necessary comprehensive transaction reports and audit trail.

The MCC Stations are unmanned and can be used in single or multiple lane facilities. At entry, the ticket data is stored with the entry transaction data at the Central Credit Card System Server. The MEC* Entry Station then sends a vend signal to open the entry gate. At exit, the patron inserts the ticket in the motorized ticket mechanism. The data on the ticket is read and the fee computed. The MCC TICO exit station then displays the transaction total on the LCD screen. The patron then inserts a credit card. The system processes the card and at request issues a receipt upon valid credit card processing.
The MCC Exit Station then sends a vend signal to open the exit gate. Depending on connection speed and credit card processing system, the transaction can be as fast as 3 seconds.

Central Credit Card System Server

The MCC series of Credit Card

Exit Stations is designed to communicate with the Central Credit Card System Server, via TCP/IP. The Server features an integrated modem and can accommodate up to 32 total entry or exit lanes. It can be programmed for on-line (every transaction) or batch transaction authorization. A high-speed online connection is required for the Central Credit Card System Server.

Housing

The MCC series of Credit Card Exit Stations are constructed from 14 gauge, galvanized, and phosphate treated sheet steel with a stainless steel base. The to is made from high grade stainless steel The entire housing is powder coated with RAL polyester powder.

Standart features:

-TCP/IP connection
-Lighted patron interface buttons
-Lighted credit card insertion reader
-Convinient LCD user interface
-Pre-Setup for intercom
-Robust design

Optional Features

- Custom Powder Coat Cabinet Colors
- Intercom System
- Access Proximity Reader
- Custom Software

- Custom Receipt Logo

Foundation

Thanks to dimensions & construction that are identical to our MIB barriers, the same kind of foundation is required for the MCC series of Credit Card Entry & Exit Stations.
